The Psychology of Music serves as an introduction to an interdisciplinary field in psychology, which focuses on the interpretation of music through mental function. This interpretation leads to the characterization of music through perceiving, remembering, creating, performing, and responding to music.
The Psychology of Music | ScienceDirect
This investigation combines the academic study of music (musicology) with the academic study of human individuals (psychology). Areas of psychology frequently drawn upon within the psychology of music include biopsychology, perception, cognition, creativity, motivation and emotion.

Psychology of Music Information and Resources
Music psychology, or the psychology of music, may be regarded as a branch of both psychology and musicology. It aims to explain and understand musical behaviour and experience, including the processes through which music is perceived, created, responded to, and incorporated into everyday life. Musicology is the study of music.

Music psychology - Wikipedia
Since the earliest writing on the psychology of music, researchers have been concerned with the many ways in which people use music in their lives. In the first part of this paper, we reviewed literature spanning psychological, musicological, biological, and anthropological perspectives on musical function.
